The Claims Defining the Invention are as Follows

5

20

- A short sleep/nap management apparatus comprising sensor means to detect one or more physiological parameters associated with a transition in sleep stages from wakefulness, processing means to process said parameters to determine when said transition is reached and start a timer to run for a predetermined period, and alarm means to actuate at the end of said predetermined period.
- 2. A short sleep/nap management apparatus comprising sensor means to detect one or more physiological parameters associated with a transition in sleep stages from wakefulness, said transition being any point in time from the onset of stage 1 or stage 2 sleep, to an event preceding onset of stage 3 sleep, processing means to process said parameters to determine when said transition is reached and start a timer to run for a predetermined period, and alarm means to actuate at the end of said predetermined period.
- 15 3. A short sleep/nap management apparatus as claimed in claim 1 or 2 wherein said predetermined period is user adjustable.
 - 4. A short sleep/nap management apparatus as claimed in any one of claims 1 to 3 wherein said sleep management apparatus includes a second timer to run for a second predetermined period, wherein said alarm means actuates at the end of said second predetermined period.
 - A short sleep/nap management apparatus as claimed in any one of claims 1 to 4 wherein said transition is any point in time from the onset of stage 1 sleep, to an event preceding onset of stage 2 sleep.
- 6. A short sleep/nap management apparatus as claimed in claim 5 said transition is a point in time at or shortly after the onset of stage 1 sleep.
 - A short sleep/nap management apparatus as claimed in any one of claims 1 to 6 wherein said transition point is user adjustable.

- 8. A short sleep/nap management apparatus as claimed in any one of claims 1 to 7 wherein said sensor means senses heart/pulse rate.
- A short sleep/nap management apparatus as claimed in claim 8 wherein said one or more parameters detected is a significant change in average heart rate, being sustained rather than transient or temporary.

5

15

20

- 10. A short sleep/nap management apparatus as claimed in any one of claims 1 to 9 wherein said apparatus includes monitoring means to record said one or more parameters, as a function with time.
- 11. A short sleep/nap management apparatus as claimed in claim 10 wherein said
 apparatus is provided with means to produce a chart from said monitoring means.
 - 12. A method of achieving a short sleep or nap comprising detecting one or more physiological parameters associated with a transition in sleep stages from wakefulness, determining when said transition is reached and timing a predetermined period, and actuating alarm means at the end of said predetermined period.
 - 13. A method of achieving a short sleep or nap comprising detecting one or more physiological parameters associated with a transition in sleep stages from wakefulness, said transition being any point in time from the onset of stage 1 or stage 2 sleep, to an event preceding onset of stage 3 sleep, determining when said transition is reached and timing a predetermined period, and actuating alarm means at the end of said predetermined period.
 - 14. A method as claimed in claim 12 or 13 including providing for said predetermined period to be user adjustable.
- 25 15. A method as claimed in any one of claims 12 to 14 including providing a second timer to run for a second predetermined period, wherein said alarm means actuates at the end of said second predetermined period.

- 16. A method as claimed in any one of claims 12 to 15 wherein said transition is any point in time from the onset of stage 1 sleep, to an event preceding onset of stage 2 sleep.
- 17. A method as claimed in claim 16 said transition is a point in time at or shortlyafter the onset of stage 1 sleep.
 - 18. A method as claimed in any one of claims 12 to 17 including providing for said transition point to be user adjustable.
 - 19. A method as claimed in any one of claims 12 to 18 wherein the detecting of said transition utilises sensor means to sense heart/pulse rate.
- 10 20. A short sleep/nap management apparatus substantially as herein described with reference to the drawings.
